SUMMARY

I build AI systems and the teams that build them. With 16+ years of experience across engineering leadership and enterprise AI, I specialize in transforming AI innovation into reliable production software. Currently a Principal SDE, I balance high-level strategy with active technical contribution, architecting core GenAI workflows and maintaining a high-performance Python stack. I focus on mentoring talent, managing stakeholder expectations, and driving the long-term evolution of tech stacks.

SKILLS

Engineering & Organizational Leadership:

Cross-departmental technical strategy, engineering roadmaps, team mentorship, talent density focus, and delivery ownership.

AI & GenAI Strategy:

Enterprise RAG platform architecture, Agentic Workflows (CrewAI), hybrid ML+AI cost optimization, LLM lifecycle management, and evaluation pipelines.

Cross-Functional Technical Governance:

Enterprise-wide Python stack ownership, secure SDLC enforcement, Docker/Kubernetes best practices, and microservices architecture standardization.

Internal Stakeholder Management:

Translating business requirements into technical OKRs, aligning engineering efforts with product strategy, and driving cross-team collaboration.

WORK HISTORY

Infrd, Bangalore, India

Principal Software Development Engineer

Jan 2021 - Present

- **Industry Recognition & Product Strategy:** Architected the core GenAI and ML/AI capabilities that propelled Infrd to be recognized as a Leader in the *Gartner Magic Quadrant* and by *Everest Group*.
- **R&D, Innovation & Patents:** Coordinated cross-departmental R&D efforts, resulting in the company receiving the *"Innovator of the Year"* streak from Deep Analysis.
- **Organizational Python Ownership (Cross-Departmental):** Own and evolve the complete Python technology stack across multiple teams and departments; define and enforce enterprise-wide standards for security, high-performance asynchronous processing (FastAPI/Flask), and code quality.
- **Cost Efficiency Architecture:** Designed and delivered a hybrid ML+AI system that achieved a 30–40% reduction in operational costs compared to standard LLM-only implementations (e.g., Gemini-pro) through intelligent model routing and tuning.
- **Infrastructure & Security Governance:** Lead containerization (Docker) and orchestration (Kubernetes/EKS) strategies on AWS, ensuring production-ready, highly resilient AI deployments against rate-limiting and SLA degradation.

- **Team Leadership:** Lead and mentor a team of 12+ Python/ML engineers, implementing 90-day growth plans focused on talent density and driving engineering excellence across the organization.

Delivery Hero, Berlin, Germany

Software Engineer II

Mar 2020 - Dec 2020

- Designed and scaled Python-based backend microservices (Flask) for a high-traffic logistics platform, ensuring reliable real-time order processing across distributed systems.
- Collaborated with internal Product Owners and engineering leadership to translate business objectives into technical OKRs, execution roadmaps, and cross-functional Agile delivery plans.
- Partnered with Data Science and BI teams to integrate analytical workflows into production services, enabling data-driven decision-making and operational insights.
- Drove operational excellence and incident management, improving system uptime and deployment reliability through Infrastructure-as-Code (Terraform, Helm) and robust observability pipelines (Grafana, New Relic).

Nvidia, Pune, India

Senior Tools Development Engineer

Aug 2009 - Jan 2020

- Led a team of 8+ engineers delivering embedded automation frameworks and internal web-based engineering tools, supporting large-scale software development workflows across multiple product lines.
- Owned full software development lifecycle (SDLC) from requirements gathering and system design to implementation, deployment, and long-term maintenance.
- Designed and maintained scalable data management solutions for production systems, ensuring data integrity, traceability, and cross-environment consistency.
- Drove root cause and corrective action (RCCA) analysis for complex production issues, improving defect triage accuracy and reducing recurring failures.
- Collaborated cross-functionally with QA, release engineering, and platform teams to improve system performance, installation workflows, and deployment stability.
- Advocated automation-first engineering practices and crowdsourcing initiatives to accelerate internal tooling development and improve engineering productivity.

PUBLICATIONS

-
- **Locale-Conditioned PII Substitution with Small Language Models:** arXiv [2605.13538](https://arxiv.org/abs/2605.13538)
 - **Tool Attention Is All You Need:** arXiv [2604.21816](https://arxiv.org/abs/2604.21816)
 - **The Great Recalibration:** SSRN [6071412](https://ssrn.com/abstract=6071412)

PATENTS

Note: The following applications have been filed and are currently pending review by the USPTO.

- **US Patent App. No. 19/375,298:** System and Method for Optimizing Queries for Extracting Entities from Documents
- **US Patent App. No. 19/375,285:** System and Method for Optimizing Queries for Extracting Entities and Entity Values from Documents
- **US Patent App. No. 19/432,186:** System And Method For Extraction Of Entities From Documents

EDUCATION/CERTIFICATION

Bachelor of Engineering, Information Technology

2005 – 2009

Government College of Engineering Amravati, IN

IBM Enterprise Design Thinking Co-Creator

Certified ScrumMaster (CSM): Scrum Alliance (Credential ID 001022708)
